### **DETAILED ACTION**

Claims 1-12 are presented for examination. Claims 1 and 4 are independent claims.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform to current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

The following is based on Examiner's best understanding of claims as they are currently presented.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-12 rejected under 35 U.S.C. 102(e) as being anticipated by Juitt et al., (U.S. Patent No. 7,042,988 and Juitt hereinafter).

Regarding claims 1-3, Juitt discloses a user identification information protection method for encrypting each field of a message transmitted through at least one relay station by using encryption schemes which are respectively effective in between a relay station requiring each field or a party on the other end of communication (i.e., The IPSec protocol is particularly useful for users communicating sensitive data to and from the protected network 110. IPSec is commonly used to describe a combination of two protocols: IPSec and IKE (Internet Key Exchange). IKE is a protocol that enables an encrypted connection to be negotiated between two end points. IPSec data exchange is based on symmetric keys; IKE uses asymmetric keys (e.g., keys from a public key infrastructure) to initiate an IPSec link)(col. 12, lines 7-67 and col. 13, lines 1-12).

Regarding claims 4-12, Juitt discloses a user identification information protection method comprising the steps of:

performing hierarchical encryption of each part of a message containing identification information of a mobile user with keys at different encryption levels respectively (i.e., The IPSec protocol is particularly useful for users communicating sensitive data to and from the protected network 110. IPSec is commonly used to describe a combination of two protocols: IPSec and IKE (Internet Key Exchange). IKE is a protocol that enables an encrypted connection to be negotiated between two end points. IPSec data exchange is based on symmetric keys; IKE uses asymmetric keys (e.g., keys from a public key infrastructure) to initiate an IPSec link), routing the encrypted message to a correct network by using a home domain name (col. 10, lines 53-67 and col. 11, lines 1-6), and further concealing actual identification information of the mobile user by using a temporary domain specific identifier (col. 12, lines 7-67 and col. 13, lines 1-12).
